### Atkinson Oil Tank Water Soaker

The Atkinson oil tank water soaker is designed to soak water from fuel that has built up over time and collected at the bottom of the tank due to condensation caused by the difference in temperature of the fuel and the air outside the tank.

The soaker has a compound that attracts water and turns it into a gel that can then be removed safely along with the soaker by using the retrieval cord attached.

There are two sizes available with different capacities of absorption depending on the extent of the water problem.

One will soak 0.5 litres and the larger one 1 litre.

Technical Details below.

### SPECIFICATIONS

Part Number - WAS-10

Size 10"

Length – 290mm

Diameter – 85mm

Weight – 320g

Capacity 0.5 litres water

Part Number – WAS-15

Size 15"

Length – 430mm

Diameter – 85mm

Weight – 400g

Capacity 1.0 litres water

#### Material Specs

Plastic Housing – PE

Sack Fabric – Cotton

Mesh – Nylon

Absorption Chemical – SAP (spec available)

Lanyard - Nylon

Ballast – Granite Stone Crush
