BRAND

DESCRIPTION

Used to ensure a head of oil above the burner to provide a gravity feed supply. Inbuilt pump and micro switches call for oil when the reservoir gets low and switches itself off when full.

Maximum lift is 8 metres and the maximum distance to the oil tanks is 100 metres.

Oil lifters can also be fitted with a leak detection tray, this will isolate the oil pump from emptying and refilling the reservoir if it detects a leak.

Oil Lifters can be fitted inside the building as well as outside. If the unit is being fitted inside it should be in a fire walled, ventilated area. If it is being fitted outside the building it needs to be in a weatherproof box as it is not IP rated.

FEATURES

- 'Auto' fill on initial priming of the unit. PCB surge protector
- Diagnostic flashing lights show if an alarm condition occurs
- Inlet & outlet connection 3/8" BSP
- Option leak detector & drip tray available
