#### BRAND

## DESCRIPTION

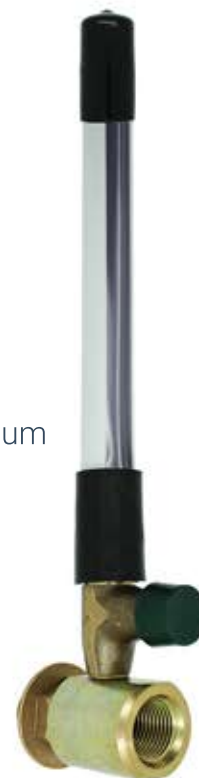

The most popular gauge ever produced for the visual inspection of a tank's contents. Produced to BS799 and featuring a push-to-read button which isolates flow into the tube when released, these gauges are not only popular for use with oil tanks, but also for use with rain water tanks, and other products that are not chemically aggressive to the gauges component materials (not WRAS approved for use with drinking water).

Complete with Standoff Clip for attaching to top of tank

The supporting shield on 4ft 6in & 5ft models are UPVC and on 6ft+ models are Aluminium

**Tip:** Sight Gauges should not be fitted to bunded tanks; however, they may be used on any single skinned tank or in any area that is protected by a bund. **Tip:** If you are fitting this to a plastic tank then the outlet will be recessed and you will require an extension fitting to ensure the Tankmaster does not foul the end of the tank and prevent installation. Extension pieces are available in 1", 3-1/2", 6-1/4" and 7-1/4". These are 1" BSP Male Tank fitting/lock-nut at one end and 1/2" BSP Female at the other end.

**Tip:** Always fit a gate valve to isolate the flow between the tank and the gauge in case you ever have to remove this for maintenance.

## FEATURES

- Manufactured by us in the UK
- Choice of connection: 1/2" - 3/4" - or 1" available
- Choice of height: 4ft 6" - 10ft
- Choice of PVC or Aluminium sight tubing
