DESCRIPTION

The Rotary Manual AdBlue™ Pump is designed for the cost effective and simple transfer of AdBlue™, also referred to as DEF, from a drum. Thanks to its manual operation, these AdBlue™ hand pumps are a popular choice when there is no power available, or when the cost of a more sophisticated electric AdBlue™ pump cannot be justified due to the low volumes of fluid used.

Usually installed as an AdBlue™ drum pump, it comes complete with a telescopic downtube and drum connector, with a model on offer with 3m delivery hose and spout.

FEATURES

- Rotary type manual AdBlue™ pump
- Suction down tube for drum
- Polypropylene body
- Option with delivery hose & spout
- Max flow rate: 300ml per rev
- Suitable for drums up to 205 litres
- 2" BSP drum adaptor
