DESCRIPTION

The Piusi Self Service Desk 2018 Software for Piusi fuel management systems is the new revamped version of the market known Self Service Desk, having identical functionality as the previous software but benefits from a more modern, attractive and user friendly interface.

The Self Service Desk Software allows the user to view all stored refuelling transaction data recorded by the management system on a PC rather than just at the unit, enabling the convenient and easy analysis of this information. This Piusi software enables the user to see what units they have on site, view the data graphically, which can be filtered by user, date, vehicle or dispenser to narrow results and export reports in the desired format such as Excel, PDF or text only.

This fuel management software is available in two formats; a download from the Piusi website using your allocated licence key (which we recommend); or run off a USB. The Self Service Desk Fuel Management System Software allows data to be transferred through hardwiring or via a key reader connected to the PC via USB.

This fuel management software is suitable for the Piusi MC Box, Cube and Self Service fuel management system units. For those who want to upgrade from the original Self Service Desk, you can migrate your old data to ensure no history is lost.

FEATURES

- Fuel Management PC Software
- New and improved look with identical functionality
- For Piusi standard fuel management systems
- Versions to run software via web download or USB
- Data transfer by hardwiring or key reader and USB
- Additional user keys available if there are more than 10 users
