DESCRIPTION

The Piusi Cube 70MC Fuel Management System is a compact, easy to install diesel dispenser for private use, which ensures fast and precise dispensing by authorised personnel. The Piusi unit, which comes standard with a nozzle holder, internal diesel transfer pump, motor and electronic meter, is capable of recording the date, time and amount of fuel dispensed for the last 255 transactions. As well as fuel monitoring, the Cube fuel pump management system also provides fuel security by only giving authorised users access to the bunded diesel tank's contents.

The standard version of this fleet fuel management system can monitor up to 50 users, although a version for controlling 120 users is available. Using either a pin code system or the electronic data keys available, this system is set up at the unit. The transaction data can be viewed from the fuel management system's screen. However, there is additional Self Service Desk fuel management software that allows the data to be exported to a computer. The Cube 70 MC fuel tank monitoring systems can be fitted to a wall, directly onto the tank or on a stand alone pedestal.

FEATURES

- Controls up to 50 or 120 users (depending on model)
- Complete fuel dispenser
- Limits pump access to users via pin code or key
- Records transaction data such as user, date, time & QTY
- Facility to record vehicle reg number & odometer readings
- Pump start/stop & pre-set dispense features
- Can be connected to an Ocio gauge
- Local memory of 255 transactions
- K600 flow meter
- Automatic nozzle and nozzle holster
