BRAND

DESCRIPTION

The Atkinson Tanktop combines many essential devices into one compact unit, and presents A significant saving in terms of cost and labour of fitting each component in their own right. The Tanktop has a major advantage over standalone diaphragm valves which have an exposed diaphragm vent, during rain, this vent fills with water, then during frost the water freezes, preventing the flow of fuel to the burner. The Tanktop's robust waterproof cap and complex vent path prevent water ingress, and therefore extreme weather has no negative effect on its operation, the householder can rest assured that their heating system will remain operational all year round.

SERVICEABILITY

The Tanktop has an integral filter which is user serviceable by simply removing 3 hex bolts, and should be replaced annually during boiler service. No isolation valve is required, as without the suction from the burner pump, the valve self-isolates, preventing any through-flow. The diaphragm unit should provide many years of trouble free usage, though is interchangeable in seconds should a replacement be required.

FEATURES

- Diaphragm Anti Siphon Valve (Factory Set)
- Non Return Valve
- 50 Micron Filter
- Anti Spill Valve
- Surface Sealing Gasket
- Push Fit 10mm Hydraulic Outlet
- Silicone Suction Tube
- Floating Suction Head
- Purging / Priming Button
- Tank Fitting 1" BSP Parallel
- Weather Proof, For Outdoor Use
- Viton seals & diaphragm

PART NUMBER	DESCRIPTION	SPECIFICATIONS	PRICE
TTV-01-C	Atkinson Tank Top - Plastic Tank	Max Negative Head: Factory set at 3 metres Max Flow: 25 Litres Per Hour Max Vacuum: -0.6 Bar / -8.7PSI Tank Fitting: 1" BSP Parallel Male Outlet: 10mm Push Fit Hydraulic Coupling	£76.50
TTV-01	Atkinson Tank Top - Steel Tank	Max Negative Head: Factory set at 3 metres Max Flow: 25 Litres Per Hour Max Vacuum: -0.6 Bar / -8.7PSI Tank Fitting: 1" BSP Parallel Male Outlet: 10mm Push Fit Hydraulic Coupling	£76.50
