BRAND

DESCRIPTION

The Piston Manual Pump is designed for the cost effective and simple transfer of DEF, also referred to as AdBlue®, from a drum. Thanks to its manual operation, these hand pumps are a popular choice when there is no power available, or when an electric pump is not deemed necessary due to the small amounts of the fluid being dispensed.

Primarily used as a drum pump, this model comes complete with a telescopic downtube and drum connector, with a version also available with 2m delivery hose and spout.

FEATURES

- Piston type manual pump
- 510-920mm telescopic suction tube
- Polypropylene body with Viton seals
- Option with delivery hose & spout
- Max flow rate: 330ml per stroke
- Suitable for drums up to 205 litres
- 2" BSP as standard
