## DESCRIPTION

The Rotary Manual Pump is designed for the cost effective and simple transfer of DEF, also referred to as AdBlue®, from a drum. Thanks to its manual operation, these hand pumps are a popular choice when there is no power available, or when the cost of a more sophisticated electric pump cannot be justified due to the low volumes of fluid used.

Usually installed as an drum pump, it comes complete with a telescopic downtube and drum connector, with a model on offer with 3m delivery hose and spout.

## FEATURES

- Rotary type manual pump
- Suction down tube for drum
- Polypropylene body
- Option with delivery hose & spout
- Max flow rate: 300ml per rev
- Suitable for drums up to 205 litres
- 2" BSP drum adaptor

PART NUMBER	DESCRIPTION	SPECIFICATIONS	PRICE
