

PRODUCT SPECIFICATION SHEET

MultiPump – Electric AdBlue® Drum Pump

BRAND:

SUITABLE FOR:

FLOW RATE:

16LPM

Product Description

The multipump is an economical electric pump for AdBlue® designed for dispensing DEF (AdBlue®), light agricultural chemicals and water from 205 litre drums.

If you are looking for a pump that comes in a ready to go, portable kit and functions in place of a manual hand pump then this kit is a good option. The pump has two alternative power options and can be run on either 230v AC as well as 12v DC, due to its internal transformer.

The Multipump drum kit has everything required to securely attach to and dispense from a 205 litre drum. It comes complete with a delivery hose with a manual nozzle, a suction downtube. It also features a nozzle mount to stow the gun whilst not in use, allowing the spout end of the nozzle to point upwards stopping unwanted drips and securing the dispensing hose from being knocked and damaged.

Features

- Flow rate of 16lpm
- 2m delivery hose
- Manual nozzle & nozzle holster
- Portable kit
- 615-905mm suction tube
- 12v DC / 230v AC

Part Number	Description	Specifications
P8-2024	MultiPump AdBlue® Drum Pump	Duty cycle: 15 mins on 30 mins off Max flow: 16lpm Voltage: 12v / 230v
